Rich in history, driven by innovation

Virginia: So much more to love

Colonial Williamsburg, Virginia, United States

Virginia is for Lovers® has been the state’s tourism brand since 1969. Today, there are more than 30,000 businesses in the state that offer Virginia tourism experiences, and the brand has grown to include six regional tourism organizations. In 2018, the Virginia Tourism Corporation launched a new campaign called “Virginia Made,” which celebrates the state’s rich history, thriving businesses, and unique experiences. The campaign also highlights the state’s natural beauty, diverse cuisine, and welcoming communities. Virginia is a great place to visit, live, and work, and the state is committed to making sure that everyone feels welcome here. Whether you’re a first-time visitor or a return visitor, Virginia is for Lovers® has something for everyone!

New Rochelle, New York

New York State has distinguished itself for being one of the safest places to live in terms of overall crime rates. It has an extensive public transportation network, including buses, trains, and subways, which make it easy to get around the city. The state also has a strong focus on education, with many top-ranked universities and colleges. In addition, the state has a robust economy, with a diverse range of industries, including finance, technology, and healthcare. New York State is a great place to live, work, and raise a family.

City of Boston Chief of Economic Development John Hall

Japanese companies have been coming to Boston because of the talent. The city has a large number of highly skilled workers, and the state has a strong focus on education and research. In addition, the state has a strong economic development strategy, which includes a variety of incentives and support programs to attract new businesses. While Boston and the surrounding areas continue to face challenges, the city remains an attractive destination for companies looking to expand their footprint in the U.S. international market.
Boston Biomedical: Sumitomo Dainippon's gateway to 'first-in-class' innovation

The pharmaceutical industry faces a tough challenge as the current drug development process is highly inefficient and very costly. The average cost of bringing a new drug to market is now 2.6 billion JPY, a 34% increase since 2012. With 12,000 new chemicals being screened every year, only 5% make it to the market. The most challenging problem is that only 17% of new drugs ever get approved by the US Food and Drug Administration (FDA). The increase in R&D costs has come at a time when sales are declining in the developed world, where half of the world's population lives and consumes over 70% of all pharmaceutical products.

Co-developed by Boston Biomedical, Sumitomo Dainippon has been focusing on developing new drugs that are not only innovative but also have the potential to meet the needs of the world's population. The company has been working with top researchers and institutions to develop new drugs that could potentially revolutionize the way we treat cancer.

The company is working on its first oncology drug, which is a checkpoint inhibitor that targets the PD-L1 pathway. This drug has the potential to improve the survival rates of cancer patients by allowing the immune system to better fight cancer.

In addition to its current drug development pipeline, Sumitomo Dainippon is also working on new technologies that could potentially revolutionize the way we treat cancer. One of these technologies is called Cancer Stem Cell Therapy (CST). This technology involves the use of cancer stem cells (CSCs) to target and destroy cancer cells.

Sumitomo Dainippon has also been working on new technologies that could potentially revolutionize the way we treat cancer. One of these technologies is called Cancer Stem Cell Therapy (CST). This technology involves the use of cancer stem cells (CSCs) to target and destroy cancer cells.
