A new era of cooperation with Japan

The inauguration of the Panama Canal Expansion last June 26, 2016, opened a new era of cooperation with Japan. The project, which is the most significant upgrade of the world’s greatest waterway, was completed in 1914. The canal is 110 years old and is expected to have a long service life.

The expansion project was completed in 2016 and is expected to have a significant impact on the global economy. It will enable larger ships to pass through the canal, increasing trade and commerce between countries. The project was led by the Japanese government and Panama's government, and was funded by a joint investment.

The canal expansion has also facilitated the growth of the region’s economies, providing greater access to new markets and opportunities for businesses. It has created new jobs and investments in the area, leading to increased economic activity and development. The project has also attracted international investment, with companies from around the world participating in the construction and operation of the expanded canal.

The inauguration of the Panama Canal Expansion marked a new chapter in the history of the canal and its role in global trade. It represents a significant milestone in the development of the region and a testament to the enduring partnership between Japan and Panama.

Cemento Interoceánico – a vital contributor to building its nation

Amid rapid economic growth, Panama’s government and private sector are looking to the future and planning for its sustainable future. Because of this, the construction industry is experiencing a boom.

Cemento Interoceánico – the country’s only truly local cement producer – is finding itself competing with giants in the sector. In the last few years, increasing cement demand has attracted attention from global cement companies, which have identified opportunities to enter the local market. As the country continues to grow, demand will likely continue to increase as well.

Cemento Interoceánico is a leading player in the cement industry in Panama. As the country’s largest cement producer, it plays a key role in the building and construction sector.

The cement company is committed to maintaining its position as a major player in the local market. It has invested in new technologies and facilities to improve its production and quality, ensuring that it can meet the growing demand for cement.

Japanese engineering experts widen its reach in Latin America

Japanese companies have been actively expanding their presence in Latin America in recent years. This is due in part to the region’s growing economic potential and the opportunities it presents for businesses looking to diversify their markets.

For example, Nissan, which has been operating in Panama for several years, has been working to further strengthen its position in the region. The company is involved in various projects, including the construction of new factories and the expansion of existing ones. This is in line with its strategy to increase its presence in the Latin American market.

In addition to Nissan, other Japanese companies, such as Panasonic and Toshiba, have also been active in the region, entering into partnerships and joint ventures with local businesses to expand their operations.
