JAPANESE PARTNERSHIPS BOOST STATE'S ECONOMY

A huge waves of recent event and optimism swept through Texas’ business community after Japanese ac-
tor Takuya Kobayashi, who announced that he would move to the Lone Star State last year. His decision was
prompted by the state’s advantages, “stressed
the state’s economic development director, Nelson
P. Wolff, who heads the Texas Economic
Development Department.

The state has continued to attract Japanese
investors, who have poured billions into the
energy, transportation, technology, and other
industries.

“Japan is the world’s second largest economy,
and Texas has a strong track record of attracting
Japanese investors,” said the governor.

Wolff said that the state has been successful in
attracting Japanese businesses because of its
large market, people, and quality of life.

“Texas has a lot to offer Japanese businesses,
including a strong workforce, a well-educated
population, and a business-friendly climate,”
he said.

Japan has also been a major investor in Texas,
with companies like Toyota, Panasonic, and
Kubota establishing operations in the state.

“Japan is an important partner for Texas,
and we are working to strengthen our ties in the
future,” Wolff said.

The state has also been working to attract
Japanese visitors, with an increasing number of
Japanese tourists visiting Texas each year.

“Japan is a key source of visitors for Texas,
and we are looking to further expand our
relationship in the future,” Wolff said.

The state has also been working to attract
Japanese students, with a growing number of
Japanese students studying in Texas each year.

“Japan has a strong education system, and we
are working to attract more Japanese students
to our state,” Wolff said.

In conclusion, the state of Texas has been
successful in attracting Japanese partners
and investors, and we are looking to build
on our success in the future.

Mayor William D. Tate is proud of his city and rightly so. Grapevine is at the center of the Dallas-Fort Worth metropolitan area and at the center of the United States. Grapevine has an advantage in that it is on the border of Texas and Fort Worth, that will be preserved through Tax Exempt financing.

We will have a quality of life that is urban. But we also have a lot of outdoor things, great air quality. We've got good education, and people want to live where their kids can get the best education," he added.

Grapevine's many advantages, as well as its reputation as one of the best places to live in the country, apparently convinced Japanese tractor manufacturer Kubota to move its office from California all the way from Los Angeles.

Kubota was pretty much sold on the community and the region. We also found that the Japanese company compared with other Japanese companies that they don't just put their facts together. They do it face to face with before they make decisions," said Mayor Tate.

Kubota is the second Fortune 500 company to move its office to Grapevine. It has given back so much to our community with publicity. According to Mayor Tate's presidency, company has also expressed from the beginning that it enjoys the city because of its proud heritage and how it has evolved, much like its own growth and evolution.

Thankful for Kubota's presence, Grapevine invites more Japanese companies to invest in the city, Mayor William D. Tate said. "We want to create a business environment and overall quality of life."

Kubota has earned its reputation as a manufacturer of cutting-edge printing technologies and leading provider of high-quality, cost-effective digital printing solutions for today's ever-changing business climate. The company's number one goal is to provide cutting-edge digital printing solutions for its customers across a vast array of industries and business models. Each of OKI newest printing innovations are created in the same tradition of dependable engineering that has made our products the print industry's commercial-grade choice for more than four decades.

OKI Data Americas has earned its reputation as a manufacturer of cutting-edge printing technologies and leading provider of high-quality, cost-effective digital printing solutions for today's ever-changing business climate. Each of OKI newest printing innovations are created in the same tradition of dependable engineering that has made our products the print industry's commercial-grade choice for more than four decades. OKI Data Americas is a $4 billion publicly-traded company with总部 in Tokyo-based parent company OKI Electric Industry, a $4 billion publicly-traded company.

"We should locate ourselves in the center of the United States so that we can easily ship anywhere and we have three-hour flight. That is also very beneficial for us, to do business anywhere and we can do that very easily."

Another objective was to access a larger talent pool, "We are also gaining more employees as part of this expansion," Tate said. "We have an excellent and talented workforce.

"We've not made a decision based on an agressive growth plan, but the company's current success, which will use an implementation effort to increase its presence and reach into new countries, among other things," Tate said.
