JAPANESE FIND INNOVATION BEYOND SILICON VALLEY AND CARMIGE

O f several decades, Japanese invest-
ment preceded trends in con-
temporary capital markets. Their interest in
research and development was crucial in the
concentration of banks and financial firms in
Japan and the development of the South and Midwest, and the rapid-ly increasing population of Silicon Valley was the
result of these efforts. In Asia, the Japanese
invested deeply in companies that do business
with the United States, contributing to the growth
of new areas in the United States.
Collectively identified as the Mountain-
West region, the area includes parts of Colorado,
Wyoming, Utah and Idaho are coming out with
their own niches as they build their own unique
selling points to attract more foreign
 investors.
Indeed, several major enterprises, the
regulatory regimes, lack of talent and the high operating
costs in the third and second East and West Coasts
make them suitable in-roads.

And these investors are eager to con-
tribute to the development of technology. The
Society 5.0 project, a vision of the world where
smart, self-driving electric robots and
artificial intelligence dominate.

In the past two decades, the growth of fab
labs (or fabrication laboratories),
which are spreading across the world, is beginning to
attract large businesses to the
region.

One of the great features of working with
Japanese companies is that,
they realize that it must do things
differently. Particularly now that society is looking
for ways to build a business for

The Wyom ing Innovation Authority, which opened in 2016 to
facilitate the development of industrial infrastructure
designed to attract companies to the
region, is a shining example of that.
Wyoming's energy resources,
imported products, and high volume
exports, such as building new
plastics-based, low-cost materials, are
ideal to attract companies to the
area, and the high concentration of
people with technical expertise
in the energy sector help facilitate
success of Japanese companies interested in investing, "

"We share the same values as PD AeroSpace, which is extremely im-
portant. When we met with Mr. Shuji Ogawa, the CEO, you could see,
what's really important is to develop the company's global network
and meet the number of gates in anticipation of growth in pas-
tage traffic and, under the DEN Real Estate arm, to develop the
surrounding 15,000 acres for commercial use. The project will involve
developing the 346-acre, 346-acre city park/

COLORADO AIRSPACE AND PORT: READY FOR TAKEOFF
The fifth-largest county of Colorado, Adams County continues
to be the destination of choice for investors looking for an opera-
tional environment that welcomes
"Our transportation infrastructure, available labor force, and our
diversity of building and growing that
marketing strategy, which is extremely im-
portant. When we met with Mr. Shuji Ogawa, the CEO, you could see,

We look at international investment as a collaborative eff  ort. And
there be an opportunity to work with Japanese companies interested in
investing in Wyoming. There are three
unique attitudes to
investment. First, carbon economy.
Carbon Capture in

Having recently formed
partnerships with Hitachi and
Heavy Industries, WBA is deter-
ing to tap overseas markets to achieve
growth with the help of the
Wyoming Government, once future
of building and growing that
marketing strategy, which is extremely im-
portant. When we met with Mr. Shuji Ogawa, the CEO, you could see,

City officials hope that the initiative will spur economic development,
reducing business costs, increasing 
investment, especially from Japan. Mayor Herb Atchison said:

We are open for business. This is a great place to be and it's a job
that is critical to our success.

The airport’s senior vice president, David Kramer, said: "This is an
important opportunity for us to work with the Afghanistan Civil
Airports Project (CASP) to achieve our goal.

CASP aims to become the country’s main hub for commercial space
aviation, according to Kramer.

Celebration Plane"
As Nevada prepares to reopen its tourism office in Japan this year after more than a decade of inactivity, several towns and cities across the state are gearing up for an influx of Japanese tourists and investors.

Located just 5 miles east of downtown Salt Lake City, the Salt Lake City Airport (SLC) is ensuring its status as a global aviation hub by constructing a modern airport that will serve and grow with the region for decades to come.

Headed by CEO Bill Wyatt (left), Salt Lake City Airport is undergoing a transformation by constructing a modern airport that will serve and grow with the region for decades to come.

The airport currently serves more than 26 million passengers a year with facilities that were designed half a century ago. Management is now building an entirely new airport.

“The airport really has grown faster than originally expected, so design was intended to serve half the passengers that we actually get. The SLC Airport’s existing structures have served its patrons well, but we think it’s about time for a new age of airport design,” SLC Airport CEO Bill Wyatt said.

Forbes magazine, which said Utah’s economy is on a roll, with signs of slowing down. While the Utah Governor’s Office of Economic Development is unswayed by the national news, it is upbeat about Utah’s performance. It also supports the momentum that will continue for many years to come.

“We were named the No. 1 state for entrepreneurship by Forbes magazine, which said we are the best place to start a business. We also have the strongest middle class in America. We continue to receive numerous national recognitions. When you look at the direction Utah is going, it’s an incredible state for entrepreneurs and investors,” said CEO Val Hale, executive director of the Utah Governor’s Office of Economic Development.

When asked what contributed to Utah’s strong economy, Hale said “First and foremost, we have a really low tax rate, and we are easy to do business with.”

Rezzimax Pain Tuner Pro: Simple Relief for a Million Aches

Having suffered chronic neck problems and other health issues for several years, licensed physical therapist Cheryl Chery was on a mission to find an effective and natural cure for chronic pain.

“We could not find the perfect device that could help us and other people feel better. We knew what it needed to do: We just could not find one in evidence already. Because of that, approximately six years ago, we began looking for a solution to this problem,” Chery said.

After much research, the scale-up developed Rezzimax Pain Tuner Pro, a handy device that allows people to achieve chronic bodily pain and stress relief. It incorporates ancient Eastern Asian medicine principles for acupuncture, meridians, chakras and dust fascia techniques with modern scientific frequencies.

“With the realization that carefully calibrated vibrations applied to specific areas of the nervous system that enhance vagal nerve function in individuals with stress, encourages improved recovery and pain disappearance,” Chery said.

This year, the couple wants to unveil the Rezzimax Pain Tuner Pro around the world, starting with Japan, where they hope it will become popular because of its shared principles with East Asian and Western medicine.

“We would love to find the right groups to work with that recognizes the potential of our simple device to help millions of people, as well as help improve their quality of life as they age,” Chery said.

New Mexico’s Free Soft Landing Program Helps Foreign SMEs Enter the US

While many large foreign companies have offices in the United States to hire local lawyers, in-house experts and to select consultants to help them navigate American complex legal and regulatory system, many small, staff and mid-sized enterprises (SMEs) do not have the resources to afford these services.

New Mexico’s Free Soft Landing Program allows them to easily set up operations in the United States, while New Mexico wants to address this by creating an even more overwhelming to encourage SMEs to be present in the geographical size of the country and the industry strategies.

Even more overwhelming to many SMEs is the geographical size of the United States, the world’s largest consumer market and many of them grow up on the idea of establishing American operations.

New Mexico launched the ANQ-Capital Program to provide for SMEs and information on how to set up operations in the state. Interested investors choose from a list a set menu of topics and then meet with each in order to establish business relationships, innovative tourism, immigration options, international taxation, as well as legal, tax logistics and supply chain.

“Those potential investors then get a customized, multiagency agenda that includes free information with lawyers, bankers and key industry experts in areas like business matching and customs, to maximize their time in the state,” Wyett said.

As a result, many foreign SMEs may not know where to begin or how to start in the United States or locally, New Mexico is hoping that they might be interested in this list.

No End in Sight for Utah’s Economic Run

Utah Governor’s Office of Economic Development

In the early years of its formation in 1989, New Mexico’s role as one of the nation’s largest pecan producers.

Las Cruces, New Mexico.

The iconic recycled roadrunner sculpture overlooks the thriving city of Las Cruces.

With an average of 320 days of sunshine, Las Cruces is also a very popular destination for outdoor enthusiasts.

“Cheryl said.

We continue to receive tremendous support from the Utah Governor’s Office of Economic Development.

And businesses love that type of attitude. So, that has been the foundation of it, "Hale added.

Utah has an abundant supply of top talent regardless of the size of the country and the distinctiveness of the place.

"Our governor’s slogan is, ‘I want to venture outside of Las Vegas will get a small-town, rustic feel. That’s why we take pride in that, “Hale added.

Las Vegas. As a rural community, visitors who come to the state are looking for a change of pace and a different experience.

"We like to tout Pahrump as ‘60 miles west of Las Vegas, 180 degrees different’ from Las Vegas. We want you to go back. We’ve had a lot of people just fall in love with the place, “Sharik recalled.

"I came to realize that carefully calibrated vibrations applied to specific areas of the nervous system that enhance vagal nerve function in individuals with stress, encourages improved recovery and pain disappearance," Chery said.

This year, the couple wants to unveil the Rezzimax Pain Tuner Pro around the world, starting with Japan, where they hope it will become popular because of its shared principles with East Asian and Western medicine.

“We would love to find the right groups to work with that recognizes the potential of our simple device to help millions of people, as well as help improve their quality of life as they age,” Chery said.
