The G7 Energy Ministerial Meeting will be held in Kitakyushu on May 11, as which global issues on security and sustainability of energy will be discussed by the G7 ministers. Kitakyushu, Japan, a steel Bölge, is the venue for this meeting. The city is situated on the coast of the Sea of Japan, making it an ideal location for hosting such an event. Kitakyushu has been selected for this meeting because of its commitment to renewable energy and its capable of hosting large-scale conventions.

The revitalization of Kitakyushu has been an ongoing process since the city’s industrial decline in the 1970s. Today, the city is known for its innovative energy policies and has been recognized as a global leader in the field. Its efforts have been recognized by the Ministry of Economy, Trade, and Industry, which awarded the city the title of the “City of Green Energy.”

The city is home to several energy-related industries, including steel and iron production, and has implemented numerous measures to promote energy efficiency and conservation. In addition, Kitakyushu has become a hub for clean energy technologies, with several renewable energy projects underway.

The city’s energy strategy is centered around the concept of “smart energy,” which involves the integration of energy generation, distribution, and consumption. This approach aims to reduce energy waste and increase efficiency, leading to lower emissions and improved air quality.

One of the key focus areas for the G7 Energy Ministerial Meeting will be the sharing of best practices and the exchange of ideas on renewable energy solutions. With its history of industrial and energy innovation, Kitakyushu is well-equipped to host this meeting and showcase its progress in the field.

The meeting will be an opportunity for the G7 countries to discuss the challenges and opportunities in energy transition, and to work together to find solutions that benefit all nations. It is a step towards a more sustainable future, and Kitakyushu will be a key player in this effort.
